The MAC - 802.11n: A Survival Guide [Book] Part II. The MAC. Before 802.11n, the 802.11 MAC was generally viewed as being about 50% efficient—take the operating data rate of the system during transmission, and cut it in half to account for the various forms of protocol overhead needed to coordinate transmissions between stations. When data rates were relatively low, the cost of inefficiency was manageable.
