The method developer and an AOAC RI technical consultant prepare a validation outline for validation study protocols in the consulting phase. The application is reviewed by AOAC staff. The method developer completes its validation study. AOAC RI selects an independent lab to complete the independent validation study.

The ISO standard for method validation, ISO 5725-2 (8), and the AOAC Official Methods of Analysis(9) are the standards that outline how to analyze data stemming from interlaboratory trials in the context of analytical method validation. Each matrix/level combination should be treated as a separate experiment.
