This page may be used by anyone.

### Clinical Dementia Rating Assignment

The Washington University Clinical Dementia Rating scale (CDR; Morris, 1993; see Table 6.2) is a structured, clinician-rated interview that collects information on cognitive capacity from both the collateral source and patient for the evaluation of staging severity of dementia. The CDR was developed primarily to assess severity level in persons with dementia but it can be used to stage dementia in other illnesses as well (e.g., Parkinson's disease).

### Clinical Dementia Rating - an overview | ScienceDirect Topics

The Dementia Severity Rating Scale (DSRS) is a brief informant-rated, multiple-choice questionnaire made up of 12-items that measure functional abilities and parallel CDR content 7. The DSRS requires minimal staff training to administer, takes five minutes to complete, and can be completed via mail, internet, or phone.

### The Dementia Severity Rating Scale Predicts Clinical ...

The CDR is a five-point scale in which CDR-0 connotes no cognitive impairment, and then the remaining four points are for various stages of dementia: 0.5 = questionable, or very mild dementia 1 = mild 2 = moderate 3 = severe The CDR score is derived from information collected from the informant interview as well as the subject interview.
