Online Library

Chapter 1 Stepper Motor Control

consider about a stepper motor is its Resolution! The resolution of a stepper motor is the number of degrees it rotates per step (degrees/step). The most used stepper motors have $7.5^\circ/\text{step}$ and $1.8^\circ/\text{step}$. The unipolar motor which we'll be using has a resolution of $7.5^\circ/\text{step}$.

Motors With ...

Stepper motor –
Stepper motors are permanent-magnet motors that increment one step each time the motion controller sends out one pulse. When stopped, they hold their positions. NI offers stepper motors in NEMA 17, 23, and 34 sizes with a range of torque ratings for each size.

Chapter 1 Stepper Motor Control

Products

A stepper motor is a motor controlled by a series of electromagnetic coils. The center shaft has a series of magnets mounted on it, and the coils surrounding the shaft are alternately given current or not, creating magnetic fields which repulse or attract the magnets on the shaft, causing the motor to rotate.

Stepper Motors | code, circuits, & construction

For a stepper motor, the 4 terminal pins on the H-Bridge should connect to the 4 leads of the motor. The 4 logic pins will then connect to the Arduino (8, 9, 10, and 11 in this tutorial). As shown in the Fritzing diagram, an external power source can be connected to power the motors.
