Here is the subroutine. Note that because of the technical requirements of the subroutine, and the fact that a TM is not allowed to keep its head stationary, when we see a non-0, we must enter state  $q_3$ , move right, and then come back left in state  $q_4$ , which is the ending state for the subroutine.

8-1C Solution We are to compare pipe flow in air and water. Analysis Reynolds number is inversely proportional to kinematic viscosity, which is much smaller for water than for air (at 25 C, air =  $1.562 \cdot 10^{-5} \text{ m}^2/\text{s}$  and water =  $0.891 \cdot 10^{-3}/997 = 8.9 \cdot 10^{-7} \text{ m}^2/\text{s}$ ). Therefore, for the same diameter and
