These reports are dictated immediately following a surgery, then later transcribed and become part of a patient's medical records. Yet when the term "auditing" comes up in our world of healthcare, many of us have been trained to think of Evaluation and Management (E/M) services, and not the auditing of operative reports.

### Expert Tips for Coding and Auditing Operative Reports

The first step in coding from an operative report is understanding the various names that are used to define the documentation recorded for a surgical or treatment session. The operative report and the operative progress, procedure, and treatment note contain both diagnostic and procedural information.

### Coding from the ICD-10-CM and -PCS

The operative report is truly a goldmine of information. This is true in ICD-9, and it will be even more important in ICD-10, when coders will need to look for more specific anatomical information, as well as additional details about the procedure itself. They'll need to read each and every line looking for details related to the root operation, the surgical approach, the device, the body part/region, and more.
