The right triangles share hypotenuse AR , and reflexive property justifies that $AR \cong AR$. Since $AB \cong BC$ and $BC \cong AC$, the transitive property justifies $AB \cong AC$. Now, the hypotenuse and leg of right $\triangle ABR$ is congruent to the hypotenuse and the leg of right $\triangle ACR$, so $\triangle ABR \cong \triangle ACR$ by the HL congruence postulate.

If two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the two triangles are congruent. If two angles and the included side of one triangle are congruent to two angles and the included side of another triangle, then the two triangles are congruent. If two angles and the non-included side of one triangle are congruent to two angles and the non-included side of another triangle, then the two triangles are congruent. If three sides of one triangle are congruent to three sides of another triangle, then the two triangles are congruent.
