Currently if an ActiveX control is developed in Java, then all of the public methods of the class are exposed by COM. It is likely, however, that Visual J++ 1.1 will introduce a wizard to refine ...

**JavaBeans and ActiveX go head to head | InfoWorld**  
If you choose ActiveX, you'll be limited for now to Windows95 and NT, but that may not represent a limitation for you, and the performance improvement relative to Java may be substantial. With JavaBeans, you'll be developing components that can be shipped over a network and implemented on virtually any machine, regardless of operating system.

CORBA also leverages advantages of the Java technology. Several CORBA-compliant Java ORBs exist today. These Java ORBs make it possible to write 100% pure Java clients and servers that run on any platform where a Java VM is available. In contrast, ActiveX controls written in the Java language need to be wrapped by platform-specific binary code.
