CO 370 - Deterministic Operations Research Models Fri, 01 May 2020 21:53 The mathematical tools used for the solution of such models are either deterministic or stochastic, depending on the nature of the system modeled. In this class, we focus on deterministic models and methods in Operations Research.

(a) Deterministic Models. In deterministic models, parameters are completely defined and the outcomes related to particular course of action are certain. Certainty is the state of nature assumed in deterministic models. In other words, deterministic models represent completely closed systems and the results of the models assume single values only.

We examine theories of simple choice as a race among evidence accumulation processes. We focus on the class of deterministic race models, which assume that the effects of fluctuations in the parameters of the accumulation processes between-choice trials (between-choice noise) dominate the effects of fluctuations occurring while making a choice (within-choice noise) in behavioral data (i.e ...
