Code: `Sub Range_Variable_Example() Range("A2:B10").Select End Sub`. Run the code, and it will select the mentioned cells. This is obvious, isn't it, but imagine the scenario of using the same range in the long VBA project let's say hundred times, writing the same code of "Range("A2:A10")" 100 times will take some time, but instead we will declare the variable and assign the data ...

The custom format to show number in thousand or in million is simple: `#,##0,"k"`. `#,##0,"M"`. The "k" or "M" is optional, depend on whether you want to show it in the header or in the figure itself. The trick is to put 1 comma and 2 comma at the end of the format setting ( `#,##0` ) for "thousand" and "million" respectively.

Two adjacent thousand separators or a thousand separator immediately to the left of the decimal separator (whether or not a decimal is specified) means "scale the number by dividing it by 1000, rounding as needed." For example, you can use the format string "#,##0,," to represent 100 million as 100. Numbers smaller than 1 million are displayed as 0.
