Area = A, and. Velocity = V, Then
volumetric flow can be put simply as: Q
 $= VA$. Mass flow rate can be determined
from volumetric flow as follows: We
know that, $M = \text{Volume} \times \text{Density of}$
fluid. Therefore, Mass flow = Volume
flow \times Density of fluid. Types of Flow.

The fluid flow meters are important to accurately monitor liquid flow in refineries, power generation, and water treatment plants. The industrial fluid flow meters are used to maintain efficiency and help understand profit gains and losses. A flow meter is a device used to measure the mass or volume of a gas or liquid.

Without going into detail here are the equations for calculating the flow for a gas in pipes larger than 5CM in diameter. These are based on ISO 1991 and 1998. Corner Pressure Taps: $L_1 = L_2 = 0.5 D$ and $D/2$ Pressure Taps: $L_1 = 1 D$ and $L_2 = 0.47 D$ Flange Pressure Taps: $L_1 = L_2 = 0.0254/D$ where D is in meters.

On one side of the meter (A), the teeth of the gears close off the fluid flow because the elongated gear on side A is protruding into the measurement chamber, while on the other side of the meter (B), a cavity holds a fixed volume of fluid in a measurement chamber. As the fluid pushes the gears, it rotates them, allowing the fluid in the measurement chamber on side B to be released into the outlet port.
