Guitar Amp Wattage Guide

A good guitar amp for a beginner is solid-state with a speaker in the 8-12" range. These little amps are usually 10-20 watts. This is more than enough power for a newbie to get started. Look for features like onboard digital effects, reverb and of course good-quality distortion.

What Wattage Guitar Amp Do I Need? - Amp Wattage Guide

The basic rule is, your amp head's power output, usually indicated by watts, shouldn't exceed the wattage rating of your speakers. If my amp is rated at 200 watts, and I was powering a 100-watt speaker, then the speakers would probably blow after turning the volume up past 5 or 6 because amps use more of their power at higher volume.

Understanding Guitar Amps Watts, Ohms, and Speaker Wiring ...

The power rating and size of speaker you choose for your amp will depend to some degree on application and price. Practice amps are usually solid state or modeling combo units featuring low power (10-30 watts) and small (8" or 10") speakers, although there are some small tube amps to be found.

Guitar Amp Buying Guide | Sweetwater

Keep in mind that wattage ratings are not linear, so a 100 watt amp is not twice the volume of a 50 watt amp. You will experience diminishing returns as you go up in wattage. In fact, the difference between 100 and 50 is only a few db, surprisingly. Wattage indicates power, but power is not directly equal to volume.

Guitar Amp Wattage: How Loud Is Enough? | WIRED GUITARIST

Conversely, a 10-watt combo is woefully inadequate if you play in a band with a drummer named Thunder Fist. Choose an amp that's right for your primary application. You'll need at least 30 watts for playing live with a rock band, but smaller amps often provide surprisingly huge sounds in the studio—just ask Jimmy Page.

How to buy a guitar amp: a guide for the first-time buyer ...

Valve amps sound louder than solid state amps, so even though a 15-watt valve amp is loud enough for gigs, a 15-watt solid state amp will be only recommended for home practice. Good solid state amps include the Orange Crush 20 RT and Blackstar ID:30TVP 30W .

What's the Right Amp for You? Guitar Amp Buying Guide ...

And so...as a VERY GENERAL rule of thumb: 50W amps or greater are better for large-venue performances. 40W amps or less are better for practice, studio, and small to mid-size venues. And if you want an exact number to start with...20W or 30W will most likely give you maximum versatility in each of these settings.

In the 1940s, '50s, and early '60s, guitar amps rarely carried speakers rated higher than 15 to 30 watts (although we'll look at a few exceptions below). Indeed, early guitar amps rarely put out more than the higher figure, until the arrival of the 80-watt Fender Twin of the late 1950s, and a few others.

10 Best Guitar Amplifier For Beginners 2020 [Buying Guide ...

(There are many factors that can affect this, not least of which are the bass amp speaker configuration, the efficiency of the speaker(s), your desired tone, the guitarist's tone, and more. Still, it is a place to start.) So if you're playing with a guitarist who has a 50W amp, that would equate to a 100W to 200W bass amp.

How Many Watts of Bass Amp Do I Need? | Sweetwater

The best 30-watt tube guitar amp is really a toss-up between the Orange Rocker 32 and the Laney Ironheart All-Tube 30W 1x12. For me, the Vox and Peavey models just don't give enough options; I like to explore nearly every genre, and being stuck in a blues or classic rock setting bums me out.

5 Best 30 Watt Tube Guitar Amps in 2020 - Buyer's Guide

A very important point to note is that wattage is not measured in an absolute scale. Hence, a 5-watt amplifier is louder than a 25-watt amplifier. So, always remember, when it comes to wattage, the lesser the value, the louder the sound. Before you buy an electric guitar amplifier, know what you want to use it for.

Monoprice 611705 5Watt 1 x 8 Guitar Combo Tube Amp. The Monoprice 611705 5Watt Combo Tube Amp is a well-built amp that allows players to have control over volume and tone. Although it may seem that there is not much control, these two are enough, especially for beginners.

Top 7 Low-Watt Tube Amps in 2020 | Guitar Niche

For that 50-watt amp, a 50-watt speaker will work fine, but so will any speaker with a power rating greater than 50 watts. It could be 60, 75, 100, or even 150 watts. In terms of functionality, it doesn't matter. Beyond that it's simply down to your tonal preference as to which speaker you select.
