Drools is a business-rule management system with a forward-chaining and backward-chaining inference-based rules engine, allowing fast and reliable evaluation of business rules and complex event processing. A rules engine is also a fundamental building block to create an expert system which, in artificial intelligence, is a computer system that emulates the decision-making ability of a human ...

Drools Documentation - JBoss

Exciting news from Bela Ban as JGroups 5.0.0.Final is released. JGroups 5 brings lots of improvements and some major API changes. Perhaps the biggest change is that Message is now an interface with a number of subclasses that perform late marshalling so object payload is serialized at the point when messages are sent, which eliminates a memory allocation and makes JGroups performance even better.
