Aperture Shutter

Speed ISO And

Exposure

exposure determines how light or dark an image will appear when it's been captured by your camera. Believe it or not, this is determined by just three camera settings: aperture, ISO and shutter speed (the "exposure triangle"). Mastering their use is an essential part of developing an intuition for photography.

Camera Exposure:

Aperture, ISO & Shutter Speed

Try it – set your aperture to the same number you wrote down earlier, multiply your shutter speed by two and set it to that number, then change your ISO to 400. It should look the same as the first image you took earlier. If you were to increase the ISO to 800, you would need to again double your last shutter speed

Mastering

Aperture Shutter

Speed ISO And

Exposure

The key difference between ISO and shutter speed is that the ISO is connected to sensitivity whereas the shutter speed is connected to the amount of light that touch the sensor. Both the values ultimately affect the exposure and quality of the photo.
