Upon taking theoretical physics last year I used the "Mathematical Methods in the Physical Sciences" by Mary Boas. While that is a fantastic book (with solutions), I find this book to build up

topics in a clearer manner. This book follows the syllabus I had for that class almost to the letter, while we had to jump around a lot in Boas's book.

Sadri Hassani (auth.) The goal of this book is to expose the reader to the indispensable role that mathematics---often very abstract---plays in modern physics. Starting with the notion of vector spaces, the first half of the book develops topics as diverse as algebras, classical orthogonal polynomials, Fourier analysis, complex analysis, differential and integral equations, operator theory, and multi-dimensional Green's functions.
