transmit functions of the packets that they receive.

Network Coding - an overview | ScienceDirect Topics

1.1 Definition of Network Coding Network coding is a networking technique where operations, which in practice tend to be algebraic algorithms, are performed on data as it passes through the nodes within a network.

Network Coding for Wireless Applications: A review

Definition - What does Network Coding mean? Network coding is a networking technique in which transmitted data is encoded and decoded to increase network throughput, reduce delays and make the network more robust. In network coding, algebraic algorithms are applied to the data to accumulate the various transmissions.

What is Network Coding? - Definition from Techopedia

Network as Code is the application of Infrastructure as Code concepts across the entire network domain. "Infrastructure as Code" is the name given to the techniques used to describe and provision the compute, storage, network, and other resources as part of the deployment of the modern applications in cloud platforms.

What Does "Network as Code" Mean? - Cisco Blogs

Network coding is a method of optimizing the flow of digital data in a network by transmitting digital evidence about messages. The "digital evidence" is, itself, a composite of two or more messages. When the bits of digital evidence arrive at the destination, the transmitted message is deduced rather than directly reassembled.
