Introduction. Start by reading through the entire lab instructions so that you get an overview of the lab session structure and scope and what should be done and how it will be examined. This lab is to learn the basics of object-oriented programming, and the corresponding language constructs in Java.

**2016 )**

OOP allows decomposition of a problem into a number of entities called objects and then builds data and function around these objects. The organization of data and function in object-oriented programs is shown in fig.1.3. The data of an object can be accessed only by the function associated with that object.
