I started out convinced that If I was going to do this open baffle thing, I had to become a purist of sorts - one baffle with one widebander per side augmented by my trusty subwoofers below 100Hz. After all the JE Labs baffles made the Lowther PM2MKII, Audio Nirvanas or Stepen's Trusonics etc. all

Cut two short lengths of 1 x 1 inch (25mm²) about 2 inches (50mm) long. Drill a hole near one end and screw them to the top rear ends of the 1 x 1 inch (25mm²) rails that form the rebate on the sides of the base panel so that the ends of both pieces are flush. Hi-fi DIY - Building full-range open baffle loudspeakers.

Regarding the filter you must have a "space" between the high and low pass. The reason is that the open baffle makes a peak. Usually up to one octave is ok. For example low pass for the bass 100 hz and high pass for the tweeter 200 hz. A simple 12 db Linkwitz Riley filter is sufficient. For
