The Hawaiian Islands are the tops of gigantic volcanic mountains formed by countless eruptions of fluid lava (1) over several million years; some tower more than 30,000 feet above the sea floor.

Origin of the Hawaiian Islands

The Hawaiian Islands are the exposed peaks of a great undersea mountain range known as the Hawaiian–Emperor seamount chain, formed by volcanic activity over a hotspot in the Earth's mantle. The islands are about 1,860 miles (3,000 km) from the nearest continent.

Hawaiian Islands - Wikipedia

A Brief History of the Hawaiian Islands 1,500 years ago: Polynesians arrive in Hawaii after navigating the ocean using only the stars to guide them. 1778: Captain James Cook lands at Waimea Bay on the island of Kauai, becoming the first European to make contact with the Hawaiian Islands.

History of Hawaii | Hawaiian History | Go Hawaii

Geological origins A hotspot beneath the Pacific Plate created Hawaii's volcanic islands. As this hotspot has remained stationary over the last 40 million years, the plate above has drifted west-northwest at a rate of three and a half inches per year. Over time, the hotspot resulted in 82 volcanoes emerging to form the Hawaiian Ridge.

Geological origins - Hawaii History - Birth of the Islands

The Hawaiian Islands are one of seven, parallel, linear chains of islands and seamounts in the Pacific Ocean of Tertiary to Recent age. Their nature had previously been explained in terms of a series of volcanoes along parallel faults. Horizontal shear motion along these faults was supposed to be extending them southeasterly.
