the teeth of the two dental arches when they approach each other as the jaws close. The term was coined by Edward Angle, the "father of modern orthodontics", as a derivative of occlusion. This refers to the manner in which opposing teeth meet (mal-+ occlusion = "incorrect occlusion"). The malocclusion classification is based on the ...

Beam Hardening. An x-ray beam is composed of individual photons with a range of energies. As the beam passes through an object, it becomes "harder," that is to say its mean energy increases, because the lower-energy photons are absorbed more rapidly than the higher-energy photons (, Fig 1).Two types of artifact can result from this effect: so-called cupping artifacts and the appearance of ...
