Background: An ongoing outbreak of coronavirus disease 2019 (COVID-19) has spread around the world. It is debatable whether asymptomatic COVID-19 virus carriers are contagious. We report here a case of the asymptomatic patient and present clinical characteristics of 455 contacts, which aims to study the infectivity of asymptomatic carriers.

A study on infectivity of asymptomatic SARS-CoV-2 carriers

Any foreign student who intends to study in China will have to obtain a student visa (X visa). This visa is granted to those students who have already been accepted for admission by a recognized educational institute in China. There are two types of the visa: X1 Visa - issued to those who go to China for study for more than 6 months.

We read with great interest the study by Coker et al 1 that provided supportive evidence for the role of oral microbiota in gastric cancer. A few studies also highlighted the possible link with oesophageal cancer.²⁻⁴ However, there is a lack of robust epidemiologic data on whether periodontal disease and tooth loss, indicators of oral microbial dysbiosis, are associated with these two cancers.
