DEAD COUPLE'S EMBRYOS TO BE THAWED - The Washington Post

Notably, the use of male-partner/donor sperm to create embryos introduces several ethical, moral and legal concerns. For example, regarding the destiny of orphan embryos in case of death or separation, cancer diagnosis and treatment may lead to relationship complications that result in a higher risk of separation.

Oocyte versus embryo cryopreservation for fertility ...

Comparative Analysis of Expressed Genes. To directly study the evolutionary characteristics of orphan genes, we prepared cDNA libraries from *D. yakuba* embryos and adults, and randomly picked clones from these libraries. The clones were initially 5'-sequenced to check for redundant clones, and the nonredundant clones were then fully sequenced to high quality.

An Evolutionary Analysis of Orphan Genes in *Drosophila*

Cryopreservation is a process in which embryos are preserved by freezing them in liquid nitrogen." Embryos are usually frozen at the two-, four-, or eight-cell stage of development since earlier stage embryos are more difficult to freeze and later stage embryos are too advanced to develop normally after thawing. 6
