The most critical advantage that slightly conical wheels (in trains) have is that they can rotate at slightly different speeds, while cylindrical ones can't (at least not as smoothly as conical ones).. You see, when a conical wheel turns, it slides to the larger part of the cone on the outside wheel and the smaller part on the inside wheel.. The upshot is that

Pull the steering wheel down in the direction that you wish to turn (for left turns, pull with your left hand, and vice versa). As you pull the steering wheel down, relax your other hand. Bring it down along the wheel to meet your “pulling” hand above your crotch. When they meet, relax your “pulling” hand and let your other hand take over.
