Ayres Sensory Integration® intervention is provided within the context of professional practice. It is designed to improve sensory perceptual abilities, self-regulation, motor skills, and praxis. In doing so, it supports the client's ability to show improved behavior, learning, and social participation.

About Ayres Sensory Integration® — CLASI

Beginning in the 1960's, Dr. Ayres systematically investigated the nature of the way the brain processes sensory information so that it can be used for learning, emotions and behavior, creating sensory integration theory as it is currently used in occupational therapy practice and applied in pediatrics and childhood education. This approach is known as Ayres Sensory Integration®.
