## **Dr. Timothy Hain - Chicago Dizziness and Hearing:**

Vertigo is a sensation of feeling off balance. If you have these dizzy spells, you might feel like you are spinning or that the world around you is spinning.

## **Vertigo: Causes, Symptoms, and Treatment**

Vertigo—a sensation of rotation or linear movement of self or

surroundings—occurs in discrete attacks that typically have an acute onset and are caused by neuro-otologic conditions.

2 Symptoms may last for seconds (benign paroxysmal positional vertigo [BPPV]), hours (Meniere's disease), minutes to days (vestibular migraine), or weeks (vestibular neuronitis).

### **Strategies for managing patients with chronic subjective ...**

This is an unexplained phenomenon: vertigo implies a right-left vestibular imbalance, and simultaneous, bilateral vestibular loss would be expected from a systemic ototoxin. The vertiginous episodes wane after a few days as the vestibular function is ablated.

## **Molecular aging of the mammalian vestibular system**

Such dizziness can last minutes to hours. A general sensation of imbalance occurs with head movement and/or with movement in the environment (like looking out of window of a fast-moving train, plane, or vehicle). Headache may accompany the dizziness and neck pain. Generally, as neck pain reduces so does the dizziness.
