designation for this welding method. According to DS/EN 24063 this welding process has number 141. The Principle of TIG Welding TIG welding is an electric arc welding process in which the fusion energy is produced by an electric arc burning between the workpiece and the tungsten electrode. During the welding process the electrode, the arc

TIG welding - Method and Application

One way to reduce t_1 is to raise the open circuit-voltage of the welding power source, as is evident from Fig. 4.10. Voltage curve 2 has lower peak value than the voltage curve 1. With curve 1 the arc striking voltage is E and the arc recovery time is t_1 . In the case of curve 2, with the same re-igniting voltage E the arc

recovery time t_2 is considerably longer than t_1 .

Welding Transformer: Principle, Requirement and Types

Laser Beam Welding is a fusion welding process in which two metal pieces are joined together by the use of laser. The laser beams are focused to the cavity between the two metal pieces to be joined. The laser beams have enough energy and when it strikes the metal pieces produce heat that melts the material from the two metal pieces and fills the cavity.
